***Reasons for Allowance***

Claims 1-21 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Chu et al., taken alone or in combination of other references, does not teach or fairly suggest a limited switch dynamic logic circuit comprising, among other things, a keeper circuit having a keeper input coupled to said dynamic node, a keeper output coupled to said dynamic node, a first supply terminal coupled to a first supply signal, and a second supply terminal coupled to a second supply signal, wherein said keeper output reinforces a first logic state of said dynamic node and does not reinforce a second logic state of said dynamic node in response to logic states of said first and second supply signals (claims 1, 11, and 17); and a keeper circuit having a keeper input coupled to said dynamic node, a keeper output coupled to said dynamic node, a first supply terminal coupled to a first supply signal, and a second supply terminal coupled to a second supply signal, wherein said keeper circuit is selectively enabled during a burn-in mode and a slow clock mode by logic states of said first and second supply signals (claim 21), as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
